

# Low-Voltage, 0.31Ω, Quad-SPDT Analog Switch

MAX4735

## General Description

The MAX4735 quad-SPDT switch routes audio signals in portable applications. Each channel has a 0.31Ω typical on-resistance, allowing the MAX4735 to drive 8Ω loudspeakers with less than 0.02% distortion.

The MAX4735 is configured as a quad-SPDT switch with two common control inputs. Each digital input controls two pairs of SPDT switches. The switches are fully bidirectional, allowing both multiplexing and demultiplexing operation. Break-before-make operation is guaranteed.

The device operates from a +1.6V to +3.6V supply and over the extended -40°C to +85°C temperature range. It is offered in both 16-pin 3mm x 3mm TQFN and TSSOP packages.

## Features

- ◆ Low 0.31Ω R<sub>ON</sub>
- ◆ 0.06Ω On-Resistance Flatness
- ◆ Excellent 0.015Ω On-Resistance Matching
- ◆ Low 0.02% THD into 8Ω
- ◆ Low 0.015% THD into 32Ω
- ◆ Audio Signal Routing
- ◆ Space-Saving, 3mm x 3mm TQFN Package
- ◆ 1.8V Logic Compatible

## Applications

- Cell Phones
- Digital Still Cameras
- PDA's and Palmtop Devices
- MP3 Players

## Ordering Information

PART	PIN-PACKAGE	TOP MARK	PKG CODE
MAX4735ETE	16 TQFN	ACT	T1633-4
MAX4735EUE	16 TSSOP	—	U16-2

**Note:** All products specified across the -40°C to +85°C temperature range.

## Pin Configurations

## Typical Application Circuit

# Low-Voltage, 0.31Ω, Quad-SPDT Analog Switch

## ABSOLUTE MAXIMUM RATINGS

V <sub>CC</sub> , INA, INB to GND .....	-0.3V to +4.0V	Continuous Power Dissipation (T <sub>A</sub> = +70°C)	
All Other Pins to GND (Note 1).....	-0.3V to (V <sub>CC</sub> + 0.3V)	16-Pin TQFN (derate 15.6mW/°C above +70°C) .....	1.25W
Continuous Current (NO <sub>-</sub> , NC <sub>-</sub> , COM <sub>-</sub> ).....	±300mA	16-Pin TSSOP (derate 9.4mW/°C above +70°C) .....	755mW
Peak Current (NO <sub>-</sub> , NC <sub>-</sub> , COM <sub>-</sub> )		Operating Temperature Range .....	-40°C to +85°C
(pulsed at 1ms, 50% duty cycle).....	±400mA	Storage Temperature Range .....	-65°C to +150°C
Peak Current (NO <sub>-</sub> , NC <sub>-</sub> , COM <sub>-</sub> )		Junction Temperature .....	+150°C
(pulsed at 1ms, 10% duty cycle .....	±500mA	Lead Temperature (soldering, 10s) .....	+300°C

**Note 1:** Signals on NO<sub>-</sub>, NC<sub>-</sub>, COM<sub>-</sub> exceeding V<sub>CC</sub> or GND are clamped by internal diodes. IN<sub>-</sub> is clamped to GND by an internal diode. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS

(V<sub>CC</sub> = 2.7V to 3.6V, T<sub>A</sub> = T<sub>MIN</sub> to T<sub>MAX</sub>, unless otherwise noted. Typical values are at V<sub>CC</sub> = 3V, T<sub>A</sub> = +25°C.) (Note 2)

## Detailed Description

The MAX4735 quad-SPDT analog switch operates from a single +1.6V to +3.6V supply. These devices are fully specified for +3V applications.

The MAX4735 features fully bidirectional, rail-to-rail CMOS analog switch channels. They can be configured as dual-DPDT switches, dual 4:2 multiplexers/demultiplexers, or as a single 8:4 multiplexer/demultiplexer. See Figure 6.

## Applications Information

### Analog Signal Range

The CMOS switches in the MAX4735 function on any signal within the power-supply voltages. If any channel exceeds  $V_{CC}$ , it is clamped to  $V_{CC}$  by a silicon diode. If any channel goes below GND, it is clamped to GND by a silicon diode. Ensure that if either of these diodes becomes forward biased, the continuous and peak currents do not exceed those listed in the *Absolute Maximum Ratings* section of this data sheet.

Figure 6. Functional Diagram

# Low-Voltage, 0.31Ω, Quad-SPDT Analog Switch

**MAX4735**

As seen in the *Typical Operating Characteristics*, the on-resistance of the MAX4735 is inversely proportional to the supply voltage. Best performance is obtained by using the highest supply voltage available within the +1.6V to +3.6V range.

## Digital Logic Inputs

Digital control inputs INA and INB control the position of the switches in the MAX4735. These inputs are diode clamped to GND only. It is acceptable to leave these pins driven in the absence of a VCC power supply.

For best performance, drive INA and INB to the full supply voltage range of the MAX4735.

The two switch sections of the MAX4735 operate independently. Drive INA low to connect COM1 to NC1 and connect COM2 to NC2. Drive INA high to connect COM1 to NO1 and connect COM2 to NO2. Drive INB low to connect COM3 to NC3 and connect COM4 to NC4. Drive INB high to connect COM3 to NO3 and connect COM4 to NO4. See Table 1.

INA and INB have typical hysteresis of 100mV by including positive feedback in the internal buffer. Thus, for applications using DC or very slow ramp rate of the digital input voltage level, connect a 100pF capacitor from IN\_ to GND to limit the ICC current at the trip point. The switching point is typically 0.7V between V<sub>IL</sub> and V<sub>IH</sub> levels.

## Power Supply

The MAX4735 operates from a +1.6V to +3.6V power supply. For best results, bypass VCC to GND with a 0.1μF ceramic chip capacitor located close to the IC.

## Audio Signal Routing

The MAX4735's low R<sub>ON</sub> makes it an excellent choice for multiplexing loudspeakers in portable equipment. THD performance is inversely proportional to load impedance. Within the audio signal range, there is no frequency component to THD. The only distortion mechanism is the R<sub>ON</sub> flatness' modulation of the signal into a load. Therefore, for best distortion performance, use higher impedance transducers.

**Table 1. Truth Table**

INA	INB	SWITCH 1 AND SWITCH 2 STATE	SWITCH 3 AND SWITCH 4 STATE
0	—	COM1 to NC1 COM2 to NC2	—
1	—	COM1 to NO1 COM2 to NO2	—
—	0	—	COM3 to NC3 COM4 to NC4
—	1	—	COM3 to NO3 COM4 to NO4

Each switch channel on the MAX4735 has an absolute maximum rating 300mA continuous current, and 400mA peak current at 50% duty cycle. When driving low-impedance loudspeakers, the peak signal amplitude should be limited so these peak currents are not exceeded. For an 8Ω load, this corresponds to 2.3VRMS. For a 4Ω load, this is 1.1VRMS.

## Package Information

The MAX4735 is offered in 16-pin TSSOP and 3mm x 3mm x 0.8mm TQFN packages. The mechanical drawings for these packages are located at the end of this data sheet. Please check [www.maxim-ic.com/packages](http://www.maxim-ic.com/packages) to ensure working with the latest information.

The TSSOP package is rated for a peak power dissipation of 755mW at +70°C, with a θ<sub>JA</sub> of 106°C/W on a single-layer PC board. The TQFN package is rated for a peak power dissipation of 1.25W at +70°C, with a θ<sub>JA</sub> of 64°C/W on a single-layer PC board. The TQFN package is the T1633-4 package code variant.
