## EVALUATION BOARD HARDWARE

### POWER SUPPLIES

The [EVAL-AD5664RDBZ](#) evaluation board can be powered either from the [SDP-B](#) port or externally by the J5 and J6 connectors, as described in Table 1.

The nanoDAC® [EVAL-MBnanoDAC-SDZ](#) motherboard supports single and dual power supplies.

Both AGND and DGND inputs are provided on the board. The AGND and DGND planes are connected at one location on the [EVAL-MBnanoDAC-SDZ](#). It is recommended that AGND and DGND not be connected elsewhere in the system to avoid ground loop problems.

All supplies are decoupled to ground with 10 µF tantalum and 0.1 µF ceramic capacitors.

**Table 1. Power Supply Connectors**

Connector No.	Label	Voltage
J5-1	VDD	Analog positive power supply, $V_{DD}$ ; 5.5 V single and dual supply
J5-2	AGND	Analog ground
J5-3	VSS	Analog negative power supply, $V_{SS}$ ; -5.5 V dual supply
J6-1	VLOGIC	Digital supply from 1.8 V to $V_{DD}$
J6-2	DGND	Digital ground

### LINK OPTIONS

Various link options are incorporated in the [EVAL-MBnanoDAC-SDZ](#) and must be set for the required operating conditions before using the [EVAL-AD5664RDBZ](#) board. Table 2 describes the positions of the links to control the evaluation board via the [SDP-B](#) board using a PC and external power supplies. The functions of these link options are described in detail in Table 3. The positions listed in Table 2 and Table 3 match the evaluation board imprints (see Figure 11).

**Table 2. Link Options Setup for SDP-B Control (Default)**

Link Number	Position

## EVALUATION BOARD SOFTWARE QUICK START PROCEDURES

### INSTALLING THE SOFTWARE

The [EVAL-AD5664RDBZ](#) evaluation software is compatible with Windows® Vista (64-bit/32-bit), and Windows 7 (64-bit/32-bit).

The software must be installed before connecting the [SDP-B](#) board to the USB port of the PC to ensure that the [SDP-B](#) board is recognized when it connects to the PC.

1. Start the Windows operating system. Download the installation software from the [EVAL-AD5664RDBZ](#) evaluation board page at [www.analog.com/EVAL-AD5664R](http://www.analog.com/EVAL-AD5664R).
1. Run the **setup.exe** file from the installer folder if it does not open automatically.
2. Power up the [EVAL-AD5664RDBZ](#) evaluation board as described in the Power Supplies section after installation is completed.
3. Connect the [EVAL-AD5664RDBZ](#) evaluation board to the [SDP-B](#) board and the [SDP-B](#) board to the PC using the USB cable included in the box.
4. Proceed through any dialog boxes that appear to finalize the installation when the software detects the [EVAL-AD5664RDBZ](#) evaluation board.

### RUNNING THE SOFTWARE

To run the program, complete the following steps:

1. Connect the [EVAL-AD5664RDBZ](#) evaluation board to the [SDP-B](#) board and connect the USB cable between the [SDP-B](#) board and the PC.
2. Power up the evaluation board as described in the Power Supplies section.
3. Click **Start > All Programs > Analog Devices > AD5664R Evaluation Software**.

If the [SDP-B](#) board is not connected to the USB port when the software is launched, a connectivity error displays (see Figure 2). Simply connect the evaluation board to the USB port of the PC and wait a few seconds. When the [SDP-B](#) board is detected, the display is updated (see Figure 3).

Alternatively, the software can be used without an evaluation board. The software runs in simulation mode displaying expected outputs based on the input data. The main window of the [AD5664R](#) evaluation software then opens, as shown in Figure 4.

**SOFTWARE OPERATION**

The software for the AD5664R allows the user to program values to the input and DAC registers of each DAC individually or collectively.

**Write to Input Register**

Click **Write to Input Register** to load the code of the input data control to the input register of the selected DAC in the **DAC Selection** box

**Update DAC Register from Input Register**

Click **Update DAC Register from Input Register** to copy the value in the input register to the corresponding DAC register. DAC outputs are automatically updated with the appropriate voltage.

**Write to Input and DAC Register**

Click **Write to Input and DAC Register** to load the code of the input data control to the input register and DAC register of the selected DAC. The DAC outputs are automatically updated with the appropriate voltage.

**LDAC Control**

Click **Pulse LDAC** to bring the LDAC register high and then back low. Doing this copies the data from the input registers to the DAC registers, and the outputs update accordingly.

The LDAC register can also be set high or low by clicking the appropriate radio button.

**Power-Down Control**

All of the DACs can be powered down simultaneously. The DACs have a selection box allowing the device to operate in normal mode or three different power-down modes. Click the blue progressive disclosure button on the **POWER-DOWN LOGIC** block to access the selection box. A window opens that allows the user to select the appropriate setting for the DAC. A drop down box allows the user to select the termination at the output of the selected DAC, as shown in Figure 5. Click **OK** to write the appropriate values to the AD5664R.

Figure 5. Powerdown Configuration Window

**Reference Control**

The DAC references can be set to operate as internal or external. Click the blue progressive disclosure button on the **REF** block to access the control options. A window opens that allows the user to click either an external or internal reference for the DAC, as shown in Figure 6. Click **Confirm** to write the appropriate values to the [AD5664R](#).
