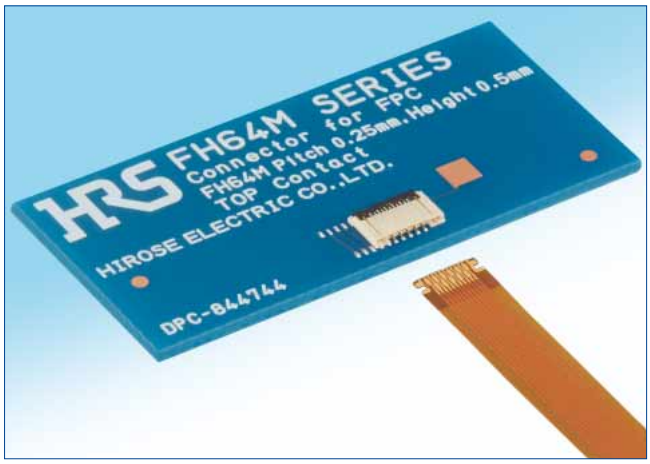
0.25mm Pitch, 0.5mm High, Top Contact, Back Flip Super Low Profile FPC Connector

FH64MA Series



■Features

1. Super low profile, top contact

This top contact connector has a very thin structure with an overall connector height of 0.5mm. (Fig.1)

2. Space-saving design

A thorough space-saving design on a 0.25mm pitch, 3.15mm depth (Locked status of actuator) produces a thorough space-saving function. (Fig.1)

3. Smooth FPC insertion

Mating guide on the connector allows for smooth FPC insertion in spite of the super low profile. (Fig.2)

4. High FPC retention force

The notches on both sides of FPC are held by metal tabs, generating a high FPC retention force in spite of the small size. (Fig.3)

5. Easy-to-manufacture FPC in spite of the narrow pitch

In spite of the narrow pitch of P=0.25mm, similar pull-out deviation tolerance of P=0.3mm creates the narrow pitch without increasing the cost. (Fig.4)

6. Detects unmated FPC by means of the proprietary mechanism.

Correct FPC insertion can be checked with FPC pattern and mis-insertion can be detected. (Fig.5)

7. Halogen free

∗AS defined by IEC 61249-2-21.
Br : 900ppm max, Cl : 900ppm max,
Br+Cl : 1,500ppm max

A thoroughly space-saving design with a super low profile, a narrow pitch and a narrow depth

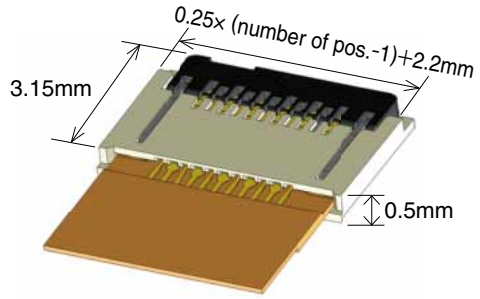


Fig.1

Smooth FPC insertion

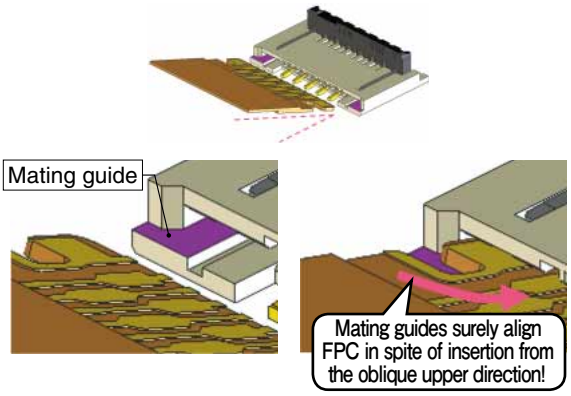

Fig.2

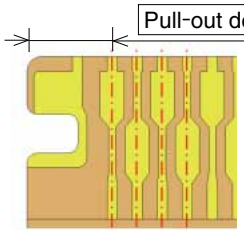
High FPC retention force

Fig.3

General tolerance of FPC



Pitch	Pull-out deviation X	FPC cost
0.3mm	±0.07mm	◎
0.25mm	±0.07mm	◎
0.2mm	±0.05mm	○

∗The FPC cost is an example image.

■Product Specifications

Rating	Current rating	0.2A	Operating Temperature Range	-55 to +85°C (Note 1)	Storage Temperature Range	-10 to +50°C (Note 2)
	Voltage rating	AC/DC 30Vrms	Operating Humidity Range	Relative humidity 90% RH or less (no condensation)	Storage Humidity Range	Relative humidity 90% RH or less (no condensation)

Recommended FPC SPC	t=0.12±0.02 Gold plated

Items	Specifications	Conditions
1. Insulation Resistance	50MΩ min	100V DC
2. Withstanding Voltage	No flashover or insulation breakdown	90Vrms AC/1min
3. Contact Resistance	200mΩ max *Including FPC conductor resistance	1mA AC
4. Mechanical Operation	Contact resistance : 200mΩ max No damages, cracks and looseness of parts	10 times insertions and extractions.
5. Vibration Resistance	Contact resistance : 200mΩ max No damages, cracks and looseness of parts	Frequency : 10 to 55Hz, half amplitude : 0.75mm, for 10 cycles in 3 axial directions.
6. Shock Resistance	No electrical discontinuity of 1μs or longer Contact resistance : 200mΩ max No damages, cracks and looseness of parts	Acceleration : 981m/s², duration 6ms, half-sine wave, at 3 times in 3 axial directions
7. Moisture Resistance in steady state	Contact resistance : 200mΩ max Insulation resistance : 50MΩ min No damages, cracks and looseness of parts	96 hours at 40℃ and humidity of 90 to 95%
8. Temperature Cycles	Contact resistance : 200mΩ max Insulation resistance : 50MΩ min No damages, cracks and looseness of parts	Temperature : -55→+15 to +35→+85→+15 to +35℃ Time : 30 → 2 to 3 → 30 → 2 to 3minutes 5 cycles with above conditions
9. Resistance to Soldering Heat	No deformation of case or excessive looseness of the terminals	Reflow : See recommended temperature profile (page 6) Manual soldering : 350±10°C, 5seconds

Note 1 : Including temperature rise caused by current flow.
Note 2 : The term “storage” refers to the long-term storage condition of unused products before PCB mounting.
For no-electrification state after PCB mounting, the operating temperature and humidity are applied.

■Materials / Finish

Parts	Material	Finish/Color	UL Regulation
Insulator	LCP	Beige	UL94V-0
	PA	Black	
Contact	Phosphor bronze	Nickel barrier gold plated	———
Metal fitting	Phosphor bronze	Pure tin reflow plated	

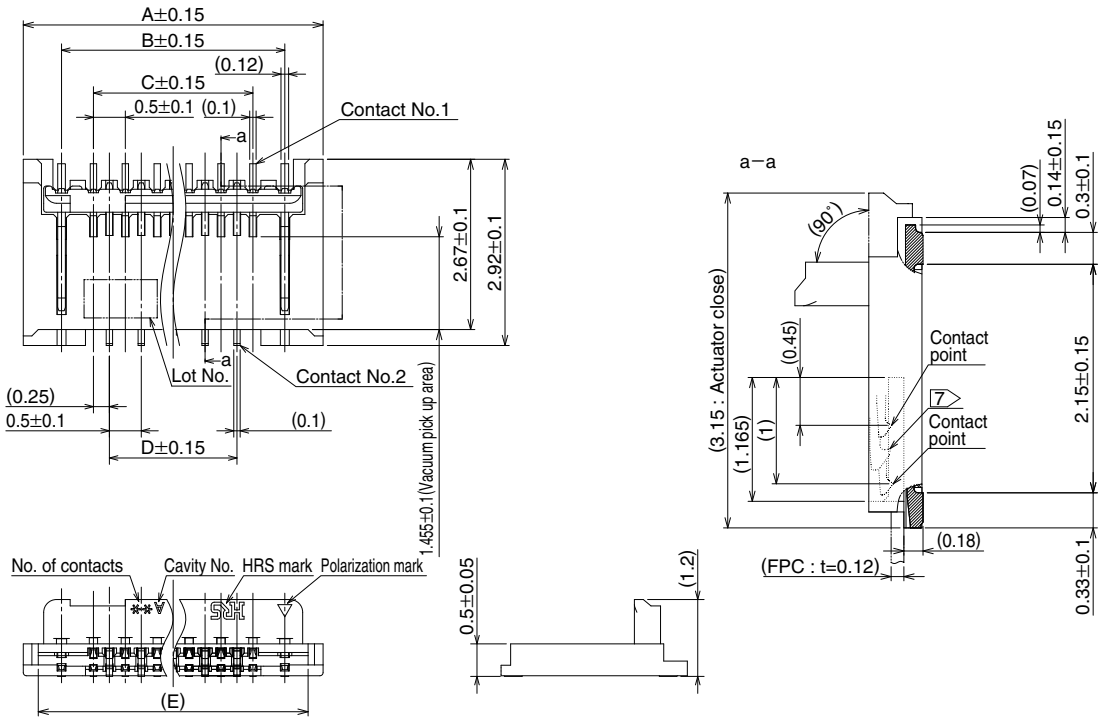
■Product Number Structure

Refer to the chart below when determining the product specifications from the product number.
Please select from the product numbers listed in this catalog when placing orders.

FH 64MA – 11S – 0.25 SHW (99)
❶ ❷ ❸ ❹ ❺ ❻

❶ Series Name : FH	❺ Terminal Type SHW···SMT horizontal staggered mounting type
❷ Series No. : 64MA	❻ Specifications None : Regular(5000 pcs/reel) (99) : 500 pcs/reel
❸ No. of Contacts : 11	
❹ Contact Pitch : 0.25mm	

■Connector Dimensions



Note
1 : The dimension in parentheses are for reference.
2 : Lead co-planarity including reinforced chucking metals shall be 0.1 max.
3 : To be delivered with tape and reel packages.
See the packaging specifications for details.
4 : Note that preventive hole for sink mark or slit could be added for improvement.
5 : The quality remains good, even with the dark spots, which could occasionally occur on molded plastic.
6 : This product satisfies halogen free requirements defined as 900ppm maximum chlorine, 900ppm maximum bromine, and 1500ppm maximum total of chlorine and bromine.
7 Shows hook part of the chucking metal.

Units : mm

Part No.	HRS No.	No. of Contacts	A	B	C	D	E
FH64MA-7S-0.25SHW(**)	580-4610-0 **	7	3.7	2.5	1.5	1	3.23

Note 1 : Contact positions without HRS No. are currently under planning and developing.
Please contact hirose for detailed information about product variation.

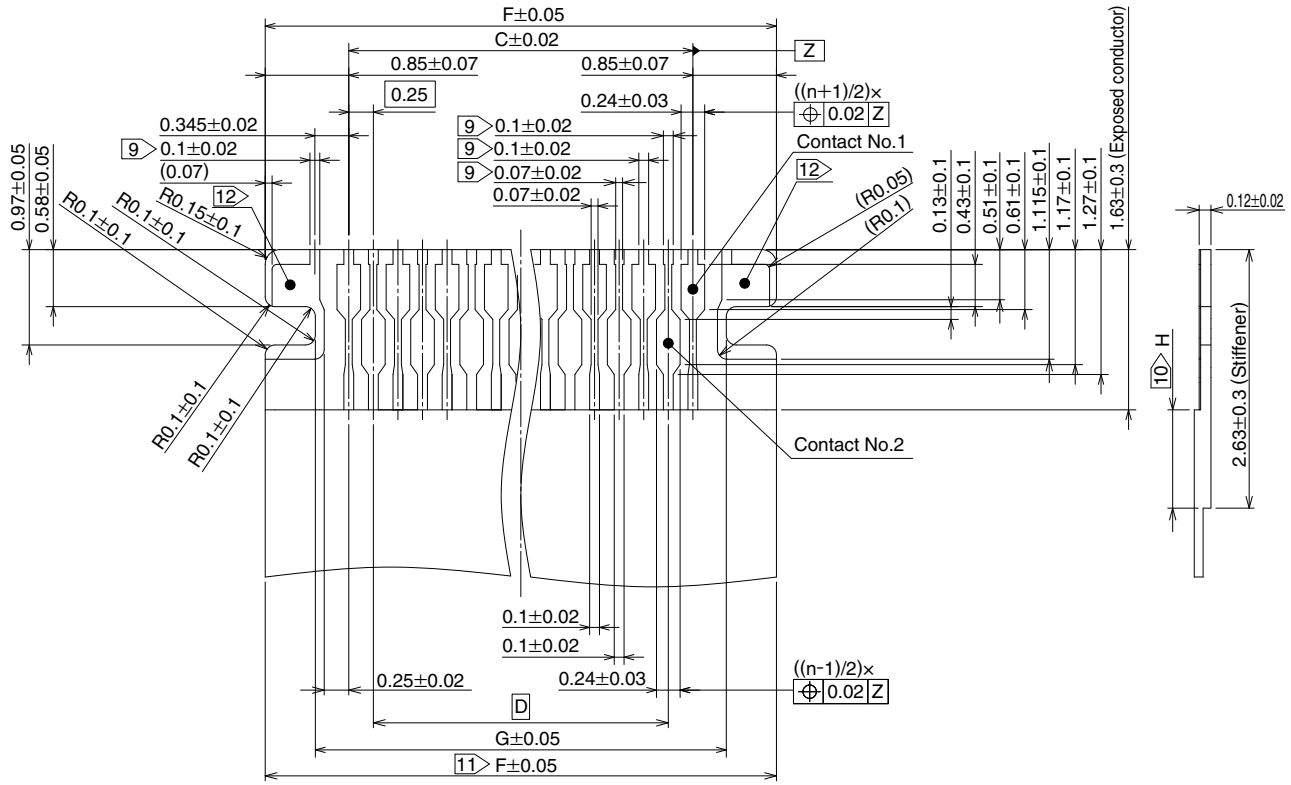
◆Recommended FPC Dimensions



Note

9 Shows recommended dimensions when lead for plating is required.
10 Dimension H must be 0.5mm minimum.
11 Indicated tolerance is applicable to the exposed conductor.
12 Both end sides of contact pad on FPC cannot be used for signal transmission.

Units : mm

Part No.	HRS No.	No. of Contacts	C	D	F	G
FH64MA-7S-0.25SHW(**)	580-4610-0 **	7	1.5	1	3.2	2.18

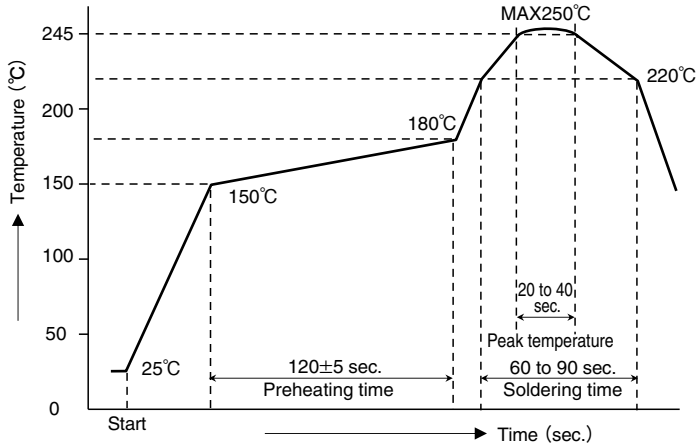
FH64MA-21S-0.25SHW(**)	Under planning (Note 1)	21	24	11.5	25.4	29.4

Note 1 : Contact positions without HRS No. are currently under planning and developing.
Please contact hirose for detailed information about product variation.

◆Temperature Profile



Applicable Conditions

Reflow method : IR/Hot air
Reflow environment : Room air
Solder : Paste type Sn/3.0Ag/0.5Cu (M705-GRN360-K2-V made by Senju Metal Industry Co.)
Test PCB : PCB material and size
Glass epoxy 32.85×15.7×1mm
Land size, per recommended on page 4.
Metal mask : Thickness and opening size
Per recommended on page 4.

This temperature profile is based on the above conditions. It may vastly depending on solder paste type, manufacturer, PCB size and mounting materials. Please use only after checking the mounting conditions.

◆Operation Methods of Connectors and Precautions

[Operation method]

As this connector is a small-sized, thin product, care needs to be taken when handling. Check the following before use.

1. Initially delivered state

The actuator is delivered in the open state, It does not need to operated before inserting FPC.

[Caution]

・Do not close the actuator while FPC is not inserted. If the actuator is closed without the FPC inserted, the FPC insertion force could increase due to the narrower contact gap.

・Do not operate the connector while it is not mounted on the board.

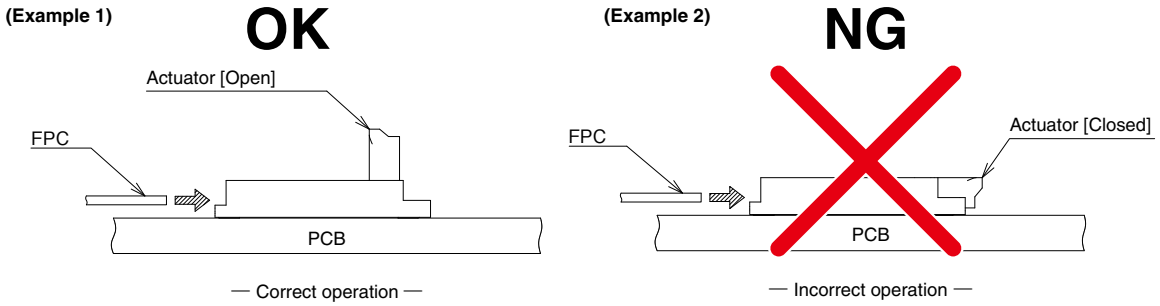
2. How to insert FPC

Insert FPC to the end placed horizontal to the board surface. (Example 1)

[Caution]

・Do not insert FPC while the actuator is closed. (Example 2)

・When FPC is inserted, do not move it in vertical, lateral or diagonal directions.

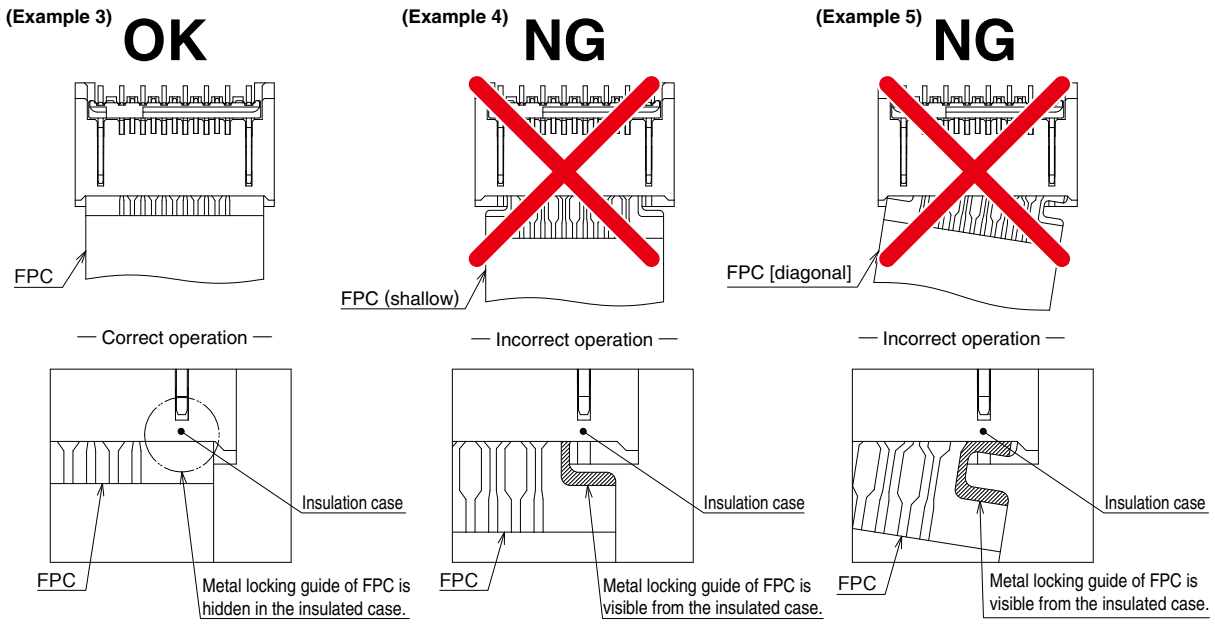


3. Check the inserted state of FPC

When FPC is completely inserted, visually inspect the inserted status of FPC. (Example 3)

[Caution]

・FPC is not inserted deep enough or in a diagonal direction. (Example 4)(Example 5)



◆Operation Methods of Connectors and Precautions

[Operation method]

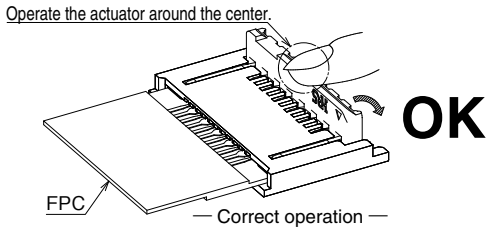
4. Actuator locking mechanism

Actuator rotates around the actuator rotation axis.
After inserting FPC, operate the actuator rotating 90°.

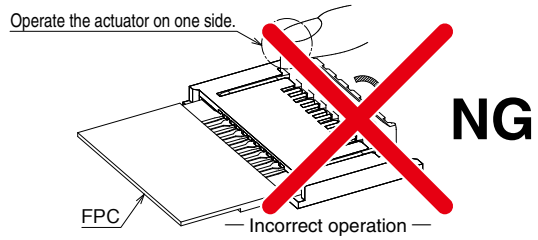
[Caution]

・Operate the actuator around the center when locked. (Example 6)
・Do not operate the actuator on one side only when locked. (Example 7)
・Do not operate the actuator by pushing in the vertical direction. (Example 8)
・Do not apply excessive force to the housing during operation. (Example 9)

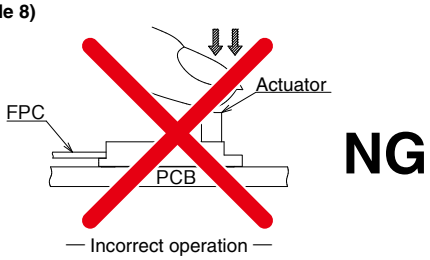
(Example 6)



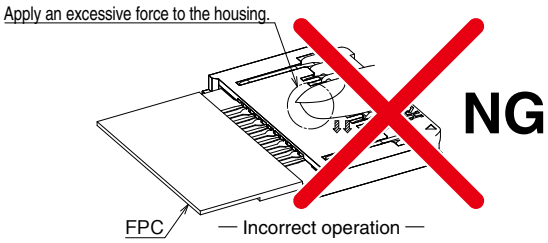
(Example 7)



(Example 8)



(Example 9)



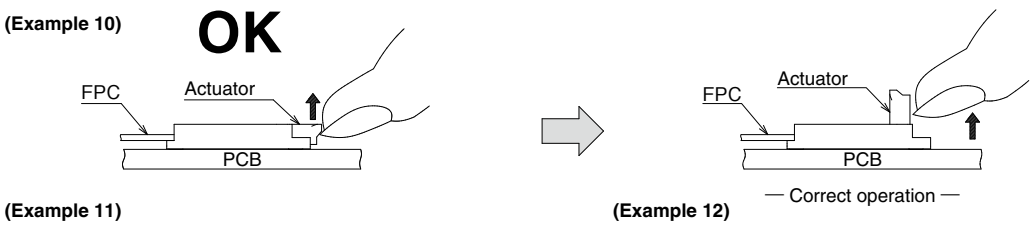
5. How to unlock the actuator

Push the actuator up slowly and release the lock. (Example 10)

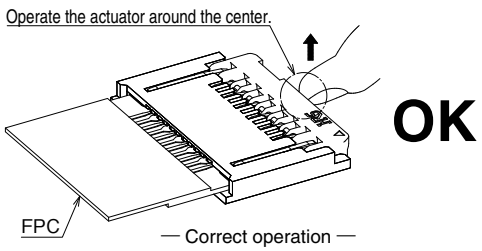
[Caution]

・Operate the actuator around the center when unlocked. (Example 11)
・Do not operate the actuator on one side only when unlocked. (Example 12)
・The actuator cannot be opened to over 90°, Do not open it over this angle. (Example 13)
・This connector adopts a back-flip design, and there is difference between the FPC insertion direction and the direction of the actuator. Do not try to open FPC from its insertion side. (Example 14)

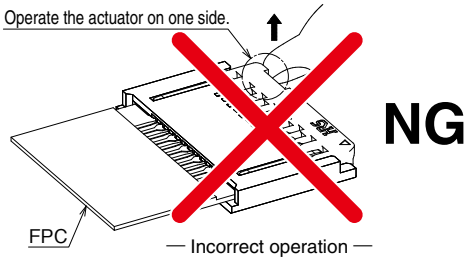
(Example 10)



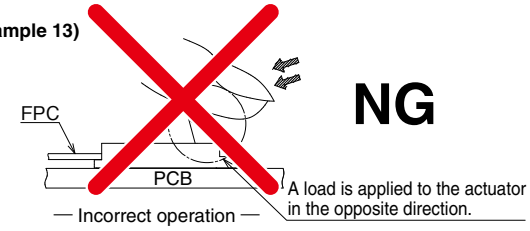
(Example 11)



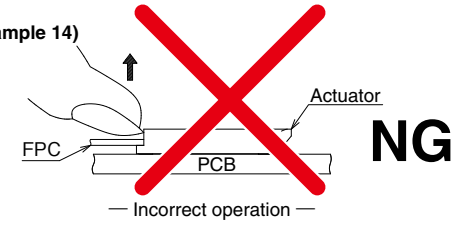
(Example 12)



(Example 13)



(Example 14)



◆Operation Methods of Connectors and Precautions

[Operation method]

6. How to remove FPC

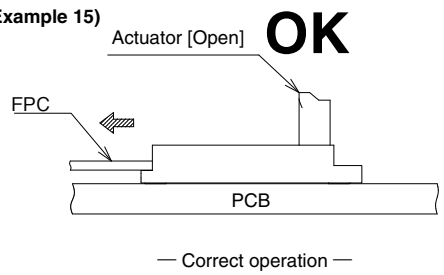
After releasing the actuator lock , remove the FPC in the horizontal direction. (Example 15)

[Caution]

・When pulling out FPC, don't apply load in the upward or lateral direction. (Example 16)

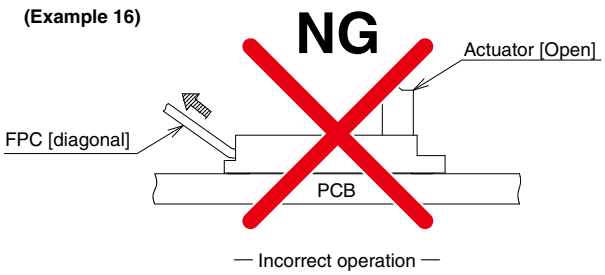
・Don't pull out FPC while the actuator is locked. (Example 17)

(Example 15)



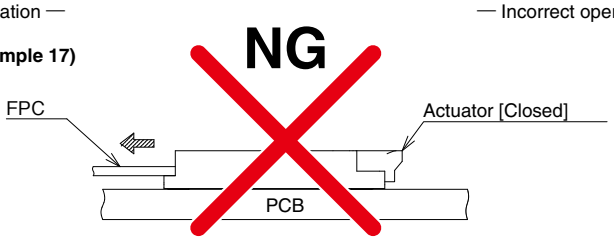
— Correct operation —

(Example 16)



— Incorrect operation —

(Example 17)



— Incorrect operation —

7. Routing of FPC

Depending on the routing of FPC to mate, a load may be applied to the connector, which could lead to a failure. In order to prevent failure, please consider the following concerning the mechanism design.

[Caution]

・When routing FPC, please be careful that FPC is not pulled and routing is carried out with a margin.

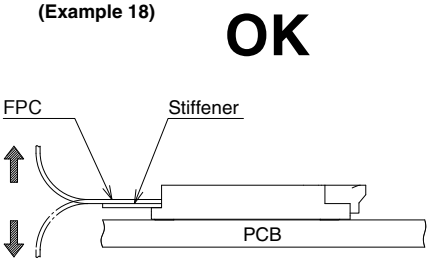
・Please check that the stiffener is placed horizontal to the board surface. (Example 18)

・Please insure there is no load is applied to the connector in the pulling, inserting or lateral direction. (Example 19)(Example 20)

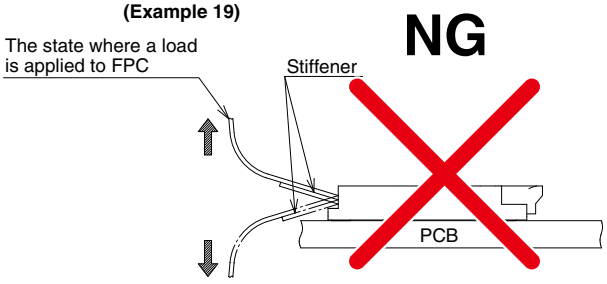
・When routing the FPC , carry out the routing operation in a manner that no direct load is applied to the connector. Please take some caution such as to fix FPC etc. (Example 19)

・Don't place any parts under the FPC that will interfere with FPC. (Example 21)

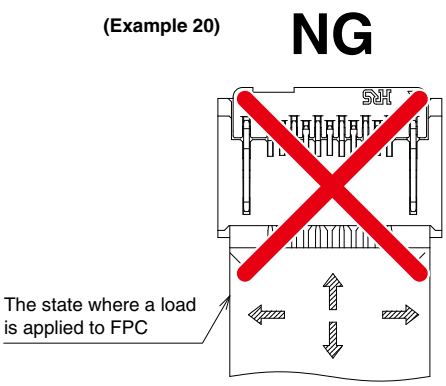
(Example 18)



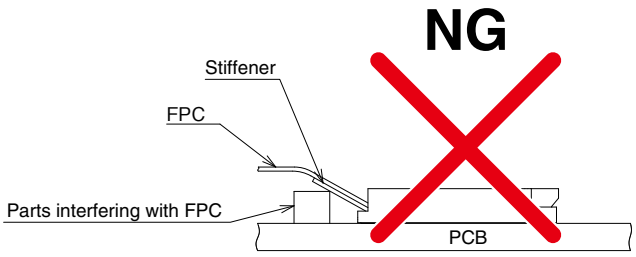
(Example 19)



(Example 20)



(Example 21)



[Cautions when Mounting PCB]

◆Warp of PCB

Minimize warp of the PCB as much as possible.
Lead co-planarity including reinforced metals is 0.1mm or less.
Too much wrap of the PCB may result in a soldering failure.

◆Flexible board design

Please make sure to put a stiffener on the backside of the flexible board.
We recommend a glass epoxy material with the thickness of 0.3mm MIN.

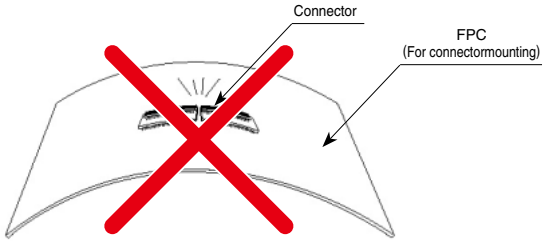
◆Load to Connector

Do not add 0.5N or greater external force when unreel or pick and place the connector etc, or it may get broken.
In addition, do not insert the FPC or operate the connector before mounting.

◆Load to PCB

・Splitting a large PCB into several pieces
・Screwing the PCB

Avoid the handling described above so that no force is exerted on the PCB during the assembly process.
Otherwise, the connector may become defective.



◆Instructions on manual soldering

Follow the instructions shown below when soldering the connector manually during work, etc.

❶Do not perform manual soldering with the FPC inserted into the connector.
❷Do not heat the connector excessively. Be very careful not to let the soldering iron contact any parts other than connector leads. Otherwise, the connector may be deformed or melt.
❸Do not supply excessive solder (or flux).
If excessive solder (or flux) is supplied on the terminals, solder or flux may adhere to the contacts or rotating parts of the actuator, resulting in poor contact or a rotation failure of the actuator.
Supplying excessive solder to the chucking metals may hinder actuator rotation, resulting in breakage of the connector.
